# Long-Lasting Cleaning and Odor Elimination—Naturally

### Biological cleaning goes beyond conventional chemical cleaning.

Traditional surfactant-based cleaners act only at the time of application, lifting and removing soils temporarily. Bionetix® biological cleaning solutions work differently—using microbiology to deliver deeper, longer-lasting cleanliness by addressing organic residues at their source.

Bionetix® biological cleaners do more than clean surfaces. They contain **Biosafety Level 1 (BSL-1)** non-pathogenic microorganisms that biologically degrade organic residues such as fats, oils, proteins, and carbohydrates. By breaking these materials down at the molecular level, Bionetix® solutions help prevent residue buildup, reduce re-soiling, and support self-maintaining cleanliness over time.

Unlike conventional cleaners that stop working once applied, Bionetix® biological cleaners continue working after use. Through residual microbial activity and ongoing biodegradation, beneficial microorganisms remain active as long as organic soils are present—providing extended cleaning performance between applications and helping reduce overall chemical usage.

Just as importantly, Bionetix® solutions do not mask odors. By eliminating odor-causing compounds at the source through microbial metabolism, they help prevent odors from returning. Environmentally compatible, biodegradable, and safer for wastewater systems, Bionetix® biological cleaners support sustainable cleaning programs across industrial, institutional, and commercial environments.
